

What is AnimoLink?

AnimoLink is a campus-based web application designed for the University of St. La Salle (USLS) to digitalize and streamline the medical certification process.

It connects students, clinic doctors, and university systems into one centralized platform where medical requests, consultations, and approvals are handled efficiently and securely.

How It Works

AnimoLink is a web-based system that allows students to register, log in, and submit medical certificate requests online by providing details and uploading documents. Once submitted, the campus clinic reviews the request and may require a consultation with an authorized doctor before approval. Students receive SMS notifications for verification, login OTP (optional), and request updates such as pending, approved, or rejected status. If approved, the medical certificate can be viewed and downloaded through the system. In case of emergencies, important alerts are also sent via SMS to ensure student safety and awareness.

Smart Medical System

AnimoLink is a digital platform that transforms the traditional medical certification process into a faster and more efficient online system within the campus.

Seamless Process

Students can easily submit requests, connect with clinic doctors, and receive approved certifications without the need for manual paperwork or long waiting times.

Reliable & Secure

All medical certifications are verified by licensed USLS clinic doctors, ensuring authenticity, accuracy, and safe record management.
